Working with students with language impairment: Vocabulary

What is language impairment?

Language impairment refers to difficulties using and understanding language and is typically defined by comparing a student's performance on a language assessment with information about what is expected of children's language development at different ages. Specific language impairment (SLI) refers to language difficulties that occur when a student's other cognitive functions are within the average range, while the term 'non-specific language impairment' is used to describe students whose language skills are below those expected of their age but may be at a similar level to their cognitive skills. In this factsheet, we will use the terms 'language impairment' or 'language difficulties' to refer to all students with difficulties using and understanding language. Approximately 7% of children are affected by language difficulties but there is very wide variability in these children's abilities. Language impairment can involve all aspects of language, namely syntax (word order), semantics (vocabulary and meaning), morphology, phonology and pragmatics. It is important to note that children with language impairment are at risk for later literacy problems.

What is ‘vocabulary’?

The term ‘vocabulary’ refers to the words known by a person. This includes both the words a student understands when they hear or read the word (receptive vocabulary) as well as those they can produce in conversation or written work (expressive or productive vocabulary). It is important to distinguish this from word recognition vocabulary, which is generally used in schools to describe words that a student is able to read, whether or not they know the meaning. Word meaning vocabulary refers to words that students can define or attach meaning to and is the focus of this discussion. In addition, this information will focus on both receptive and expressive vocabulary: receptive vocabulary refers to the understanding of words that are read or heard whereas expressive vocabulary refers to the spoken/written use of words.

There are different levels of ‘knowing’ a word from unknown (never seen or heard of it, no idea what it means), through to knowledge that the word exists, partial knowledge and complete knowledge.

Glossary

Pragmatics
The way language is used and the use of language in social contexts

Cognition
The mental processes involved in gaining knowledge

Morphology
The forms and structure of words

Phonology
The sound system of a language

Phonemic awareness
The ability to hear, identify and manipulate sounds
Students learn vocabulary items in a variety of ways including:

- explicit teaching, when a parent, teacher or other person tells the learner the word and what it means
- developing meaning from contexts such as conversation, television, books and the playground
- strategically figuring out words and their meanings based on context, the parts of the words and strategies such as using dictionaries

Typically developing learners are generally able to derive meanings from context and incidental learning situations but it is important to note that children with language impairments may not learn words as efficiently and may require more frequent and repeated exposure to truly learn a word. In addition, children with language impairments are less likely to learn words incidentally through book reading. It is also important to note that vocabulary development varies widely among children at the age of school entry.

**Why is it important? How does it impact on language and literacy development?**

Vocabulary development is a crucial part of reading, writing and functioning in the classroom and is described by Scarborough (2001) as one of the many strands that are woven into skilled reading. A large body of research has demonstrated the critical link between early vocabulary knowledge and later achievement in reading. Importantly, studies have indicated wide discrepancies in vocabulary knowledge in the early years of school between children of different socio-economic backgrounds.

In early readers, research indicates that receptive and expressive vocabulary skills impact on the development of phonological skills and word identification skills. Beginning readers, who have limited decoding skills, rely on their vocabulary skills to identify pictures and other contextual clues in order to make attempts at unfamiliar content words. Children who have difficulty understanding words are at higher risk for having difficulty blending sounds. Children with limited expressive vocabulary and who have difficulty defining words are more likely to have difficulty with word identification. In later years, research also indicates that vocabulary knowledge is strongly associated with both comprehension and overall reading achievement. It also affects students’ abilities to participate in classroom activities. The relationship between reading comprehension (understanding what you read) and vocabulary is particularly strong in upper primary school and beyond when reading is important to gain information in order to access the curriculum. The importance of reading in gaining new information is often described as a shift from ‘learning to read’ to ‘reading to learn’.

**What do vocabulary skills look like in primary school aged students?**

Children with limited vocabulary are likely to struggle with a number of areas of learning and social interaction. Some of these children will be identified before they come to school while others will be identified later by teachers or medical and allied professionals, such as speech pathologists. Many children will not be identified until perhaps much later when they present with significant learning difficulties not only in reading comprehension but in learning to accurately read more complex texts.
A child with vocabulary difficulties may show some or all of the following characteristics:

Expressive language difficulties, such as:
- hesitant language e.g. um, ah
- nonspecific words e.g. ‘thing’, ‘this’
- use of simpler words and a reduced range of words

Comprehension difficulties, such as:
- incorrect responses during class discussions
- incorrect responses to comprehension questions about a written text

Reading difficulties, such as:
- not remembering words read previously
- difficulty choosing words in context
- difficulty decoding words

See the table below for further details:

<table>
<thead>
<tr>
<th>Kindergarten - Year 2 (Early Stage 1 - Stage 1):</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students with strong vocabulary skills may:</td>
</tr>
<tr>
<td>know and use a wide variety of specific words</td>
</tr>
<tr>
<td>read more and learn more words (The Matthew Effect); find it easier to learn new words</td>
</tr>
<tr>
<td>be more likely to have good pre-reading skills and word identification skills</td>
</tr>
<tr>
<td>respond more accurately to questions and instructions</td>
</tr>
</tbody>
</table>
Students with strong vocabulary skills may: | Students with poor vocabulary skills may:
---|---
have a better ability to comprehend texts\(^9,10\) | have difficulties understanding stories read aloud to them and may have trouble answering questions about written texts
find maths word problems easier | have difficulty understanding word maths problems

As a child moves into Stage 2 of learning, the focus shifts from learning to read to reading to learn. Language is more complex and abstract in the final stages of primary school learning.

Students in Years 3 - 6 (Stage 2 - 3) will show all of the above skills, as well as the following:

**Years 3 - 6 (Stage 2 - 3):**

<table>
<thead>
<tr>
<th>Students with strong vocabulary skills may:</th>
<th>Students with poor vocabulary skills may:</th>
</tr>
</thead>
<tbody>
<tr>
<td>be able to use technical words when reading, writing and speaking</td>
<td>use a smaller variety of words, simpler words and repetitive sentences when writing or speaking</td>
</tr>
<tr>
<td>be able to generate synonyms and antonyms for common words</td>
<td>have reduced reading comprehension due to a reduced depth of knowledge of words e.g. meanings, synonyms(^{11})</td>
</tr>
<tr>
<td>understand that some words have multiple meanings</td>
<td>have difficulty using, understanding and remembering figurative language</td>
</tr>
<tr>
<td>be able to orally define words</td>
<td>show more difficulty learning new words(^{12})</td>
</tr>
<tr>
<td>have a good knowledge of word origins and apply knowledge of prefixes and suffixes to understand word meanings and to create new words</td>
<td>not learn words easily by hearing the word in conversations or discussions and may need direct instruction and repetition</td>
</tr>
<tr>
<td>draw on topic knowledge to assist them in working out the meaning of unknown words</td>
<td>show reduced skill in inferring information from text due to limited word knowledge and have significant difficulty understanding complex research data and text for writing and comprehension tasks</td>
</tr>
</tbody>
</table>
How is vocabulary assessed?

There are many assessments that can help us understand more about a student’s vocabulary skills. They range from specific vocabulary assessments, through to comprehensive tests with subtests that assess various elements of vocabulary. The majority of these tests are completed by speech pathologists who specialise in language development and language difficulties in children. Some tests might be completed by psychologists or school counsellors.

Following is a list of tests that assess vocabulary specifically or as part of an overall language assessment. The list includes measures of both receptive and expressive vocabulary. It is in no way a complete list or a recommendation for the use of any particular testing instrument.

<table>
<thead>
<tr>
<th>Tests to assess vocabulary</th>
<th>Name of Test</th>
<th>What Does it Assess?</th>
<th>Age group</th>
<th>Who Administers</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Clinical Evaluation of Language Fundamentals-4th Edition (CELF-4) Australian Standardised Edition</td>
<td>The CELF-4 assesses a range of language skills through a number of subtests. A number of these are used to evaluate vocabulary skills.</td>
<td>5 years - 21 years</td>
<td>Speech pathologists</td>
</tr>
<tr>
<td></td>
<td>Expressive Vocabulary Test, Second Edition (EVT-2)</td>
<td>The EVT-2 measures expressive vocabulary. It involves 2 tasks, labelling and providing synonyms.</td>
<td>2 years, 6 months - 90+</td>
<td>Speech pathologists, psychologists, teachers</td>
</tr>
<tr>
<td></td>
<td>Peabody Picture Vocabulary Test, Fourth Edition (PPVT™-4)</td>
<td>The PPVT-4 is a measure of receptive vocabulary (understanding of vocabulary) for Standard American English.</td>
<td>2 years, 6 months - 90+</td>
<td>Speech pathologists, psychologists, teachers</td>
</tr>
<tr>
<td></td>
<td>The WORD Test 2: Elementary and Adolescent</td>
<td>The WORD Test 2 evaluates the impact of vocabulary on academic performance.</td>
<td>6 years - 11 years, 11 months</td>
<td>Speech pathologists</td>
</tr>
<tr>
<td>Name of Test</td>
<td>What Does it Assess?</td>
<td>Age group</td>
<td>Who Administers</td>
<td></td>
</tr>
<tr>
<td>----------------------------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------</td>
<td>-----------------------------</td>
<td>--------------------------</td>
<td></td>
</tr>
<tr>
<td>Comprehensive Receptive and Expressive Vocabulary Test, Second Edition (CREVT-2)</td>
<td>The CREVT-2 measures receptive and expressive oral vocabulary in both adults and children.</td>
<td>4 years - adult</td>
<td>Speech pathologists</td>
<td></td>
</tr>
<tr>
<td>Comprehensive Assessment of Spoken Language (CASL)</td>
<td>The CASL is a general assessment of spoken language and processing (receptive) skills. Some subtests provide information about vocabulary skills.</td>
<td>3 years - 21 years</td>
<td>Speech pathologists</td>
<td></td>
</tr>
<tr>
<td>Montgomery Assessment of Vocabulary Acquisition (MAVA)</td>
<td>The MAVA is a comprehensive, standardised test for evaluating a student’s expressive and receptive word knowledge across three tiers of vocabulary words.</td>
<td>3 years - 12 years, 11 months</td>
<td>Speech pathologists</td>
<td></td>
</tr>
<tr>
<td>Test of Language Development-Primary, Fourth Edition (TOLD-P: 4)</td>
<td>The TOLD-P4 is a general language assessment with 9 subtests that measure different components of language. Some subtests provide specific information about vocabulary skills.</td>
<td>4 years - 8 years, 11 months</td>
<td>Speech pathologists</td>
<td></td>
</tr>
<tr>
<td>Test of Semantic Skills-Primary (TOSS-P)</td>
<td>The TOSS-P is designed to assess a student’s semantic skills. It yields specific information about a student’s receptive and expressive semantic and vocabulary abilities.</td>
<td>4 years - 8 years, 11 months</td>
<td>Speech pathologists</td>
<td></td>
</tr>

Supporting students with language difficulties in the classroom - general strategies and considerations

Vocabulary instruction needs to be comprehensive, integrated and school-wide. Integrated means that vocabulary is a fundamental concern in all grades, in all key learning areas and throughout the whole school day, while comprehensive means that vocabulary instruction is more than a list of words or the use of a dictionary. Comprehensive instruction can involve developing a language and word rich environment, intentional and often explicit teaching of selected words, opportunities for repeated exposure, use and practise, and strategies to allow students to learn new words independently.

Classroom teachers play an important role in the development of vocabulary skills in children in their class and particularly those with language difficulties. Following are some strategies that teachers may wish to consider when working with students with language impairments who show difficulties with acquiring and using appropriate vocabulary skills. The strategies are general, rather than specific and it is important to note that some students will need individualised programs and support by a speech pathologist.

In implementing any strategies, it is worth keeping in mind the following general framework:

**Curriculum**
- What elements of the curriculum can I adapt and/or use to highlight and teach new vocabulary?

**Environmental**
- What changes can I make to the learning/classroom environment to maximise the students' learning?

**Individual**
- What changes can I make to my teaching style (e.g. language use, pausing, repetition) to assist learning? What individual supports do the students need?

**A framework for developing skills**

Bauman et al (2007) suggest a number of components that promote effective vocabulary development:
- developing a rich and varied language environment
- explicitly teaching individual words
- teaching word learning strategies

Students with language impairment may also benefit from the vocabulary teaching strategies associated with these components but they will require additional adjustments. The table below describes classroom strategies for each of these components, with suggested adjustments for students with specific language impairment.
### Developing a rich and varied language environment

<table>
<thead>
<tr>
<th>In the classroom this can be provided by:</th>
<th>Suggested adjustments for students with language difficulties include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• the teacher reading a range of books/texts aloud</td>
<td>• reading books aloud that are at the student’s language level - it is important to use text that contains some but not too many new and difficult words</td>
</tr>
<tr>
<td>• encouraging students to read a broad range of books independently, using strategies such as literature circles, word finder bookmarks, reading logs and journals</td>
<td>• providing access to a broad range of book types (e.g. audio books, e-books) at an appropriate language level</td>
</tr>
<tr>
<td>• keeping a ‘Word Wall’ for interesting words from independent reading, content area vocabulary and other sources - encourage students to be ‘Word Wizards’ developing the habit of noticing and sharing interesting words they encounter in and out of school</td>
<td>• providing visual support for word learning - pictures, photographs, pictorial mnemonic strategies or visual organisers</td>
</tr>
<tr>
<td>• reading books aloud that are at the student’s language level - it is important to use text that contains some but not too many new and difficult words</td>
<td>• using student friendly definitions of words rather than dictionary definitions - pinpoint the word’s typical use and explain its meaning in everyday language[^15]</td>
</tr>
<tr>
<td>• providing access to a broad range of book types (e.g. audio books, e-books) at an appropriate language level</td>
<td>• providing verbal support for word learning - modelling, expanding or recasting (repeating an incorrect word back to the student in a corrected form)</td>
</tr>
<tr>
<td>• providing visual support for word learning - pictures, photographs, pictorial mnemonic strategies or visual organisers</td>
<td></td>
</tr>
<tr>
<td>• using student friendly definitions of words rather than dictionary definitions - pinpoint the word’s typical use and explain its meaning in everyday language[^15]</td>
<td></td>
</tr>
<tr>
<td>• providing verbal support for word learning - modelling, expanding or recasting (repeating an incorrect word back to the student in a corrected form)</td>
<td></td>
</tr>
</tbody>
</table>

### Explicitly teaching individual words

<table>
<thead>
<tr>
<th>In the classroom this can be provided by:</th>
<th>Suggested adjustments for students with language difficulties include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• developing ‘memorable words’, that is, words students feel they own because they use them, developed through discussing the words and students maintaining personal lists</td>
<td>• pre-teaching the most relevant and frequently occurring words for a curriculum topic</td>
</tr>
<tr>
<td>• selecting useful tier 2 and 3 words from Key Learning Areas (see NSW CER website: Selecting Words and providing multiple exposures through a variety of activities e.g. <a href="#">self-assessing word knowledge</a> by using checklists)</td>
<td>• explicitly teaching words in a rich and multi-contextual manner</td>
</tr>
<tr>
<td>• providing additional multiple repetitions or exposures to new words over time</td>
<td>• providing additional multiple repetitions or exposures to new words over time</td>
</tr>
<tr>
<td>• scaffolding the use of visual organisers - model and joint construction, teacher partially completes and child finishes</td>
<td></td>
</tr>
</tbody>
</table>
In the classroom this can be provided by:  
◊ acting out/miming word meanings  
◊ using graphic organisers:  
  - concept maps, semantic maps, Venn diagrams  
◊ ranking lists according to intensity, word clines/linear arrays  
◊ comparing words  

Suggested adjustments for students with language difficulties include:  
• using examples and non-examples to support teaching word meanings  
• teaching the student to reflect on new words learned e.g. What new words have I learned?  

---  

### Teaching word learning strategies  

In the classroom this can be provided by teaching a range of rules and using clues, including:  

- **vocabulary rule** - a general strategy for attempting to work out the meaning of new words in text  
- **context clue types** - definition, synonym, antonym, example and general clues  
- **word-part clues** - which can also be presented as a chart and as a handout for students to keep as they move from class to class  
- **prefix and suffix families** charts to use when looking at new words  

Suggested adjustments for students with language difficulties include:  
• additional modelling of strategy and scaffolding its use  
• additional modelling of how to use these and more guided and independent practice  
• supporting the student to identify when they don't know a word meaning and to use strategies to determine meaning (dictionary, discussion, context)
In summary

• Vocabulary skills vary widely among children of primary school age
• Strong vocabulary skills impact positively on children’s ability to learn to read and to participate in language activities across the curriculum
• Students who have difficulties using a range of words including specific and technical words for writing and speaking and who use hesitant language e.g. um, ah and non-specific words e.g. ‘thing’, ‘this’ may have poor vocabulary skills
• Students with poor vocabulary may not remember words read previously and take longer to learn new words, requiring numerous repetitions of words to learn their meaning
• Classroom teachers are well placed to provide activities that boost vocabulary skills in students with and without language difficulties.
